

Tobacco-Related Disparities: SES, Context, and Smoking Cessation

David W. Wetter, Ph.D.
Professor and Cullen Trust for Health Care Chair
Department of Health Disparities Research

Thank you to the National Cancer Institute, National Institute on Drug Abuse, National Institute on Minority Health and Health Disparities, Centers for Disease Control, Cancer Prevention Research Institute of Texas

Agenda

- **Socioeconomic status (SES) and tobacco-related disparities**
- **Influence of Context (Macro and Micro)**
 - Neighborhoods/community
 - Moments
- **Summary**

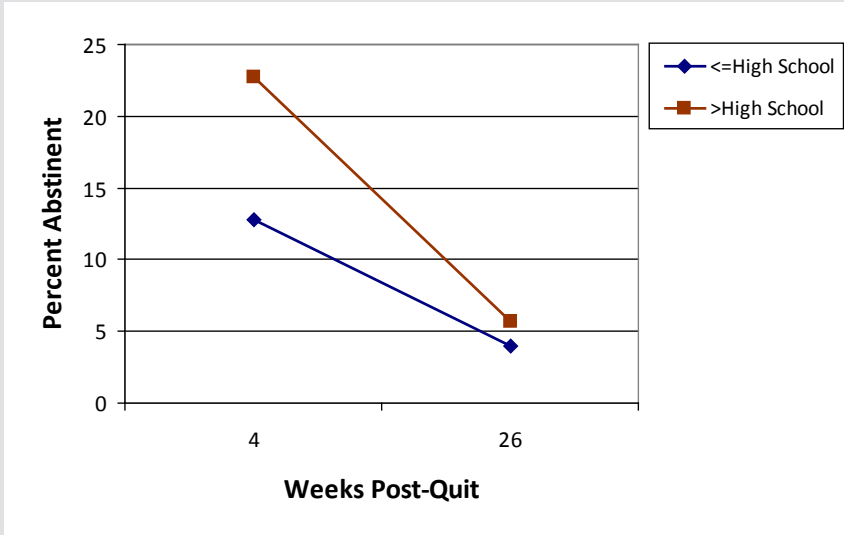

**Why focus on
socioeconomic status and
tobacco-related disparities?**

Tobacco-Related Health Disparities: Socioeconomic Status (SES)

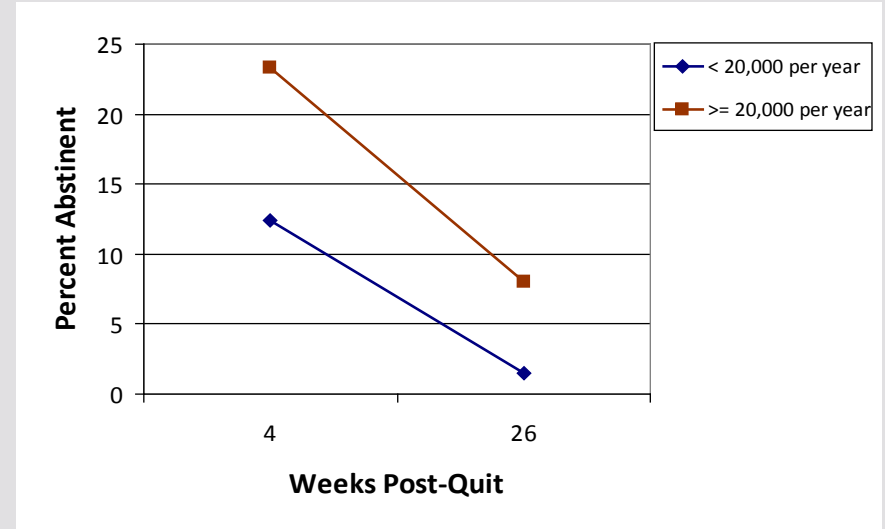

- “Poverty is a carcinogen.”
 - Samuel Broder, M.D., Former Director of the National Cancer Institute
- There is a profound SES gradient in health and mortality
 - Lower levels of education, income, and occupational status are associated with greater mortality
- Lower SES associated with higher smoking prevalence and lower cessation rates
- 58% of the SES gradient in mortality among U.S. males is attributable to tobacco use
- Over the last several decades, SES disparities in tobacco use have more than doubled

SES Indicators and Smoking Abstinence

Education

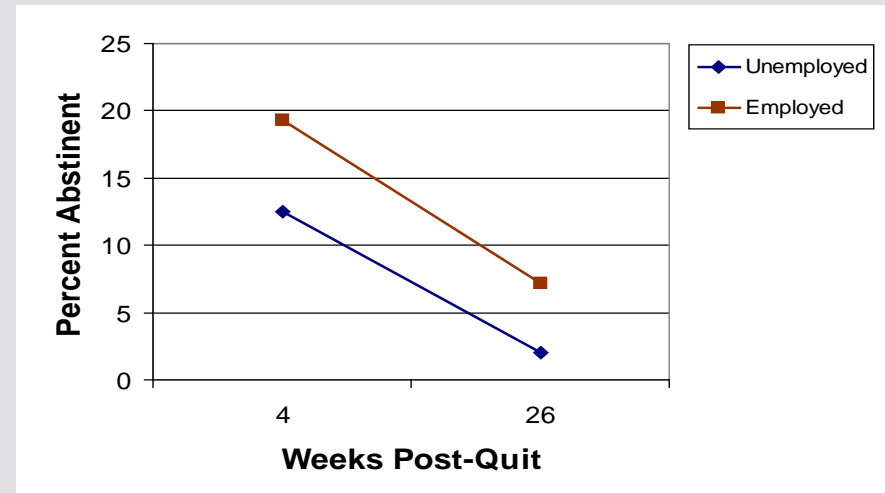

Income

Insurance

Employment

Considering Alternative Indicators of Socioeconomics?

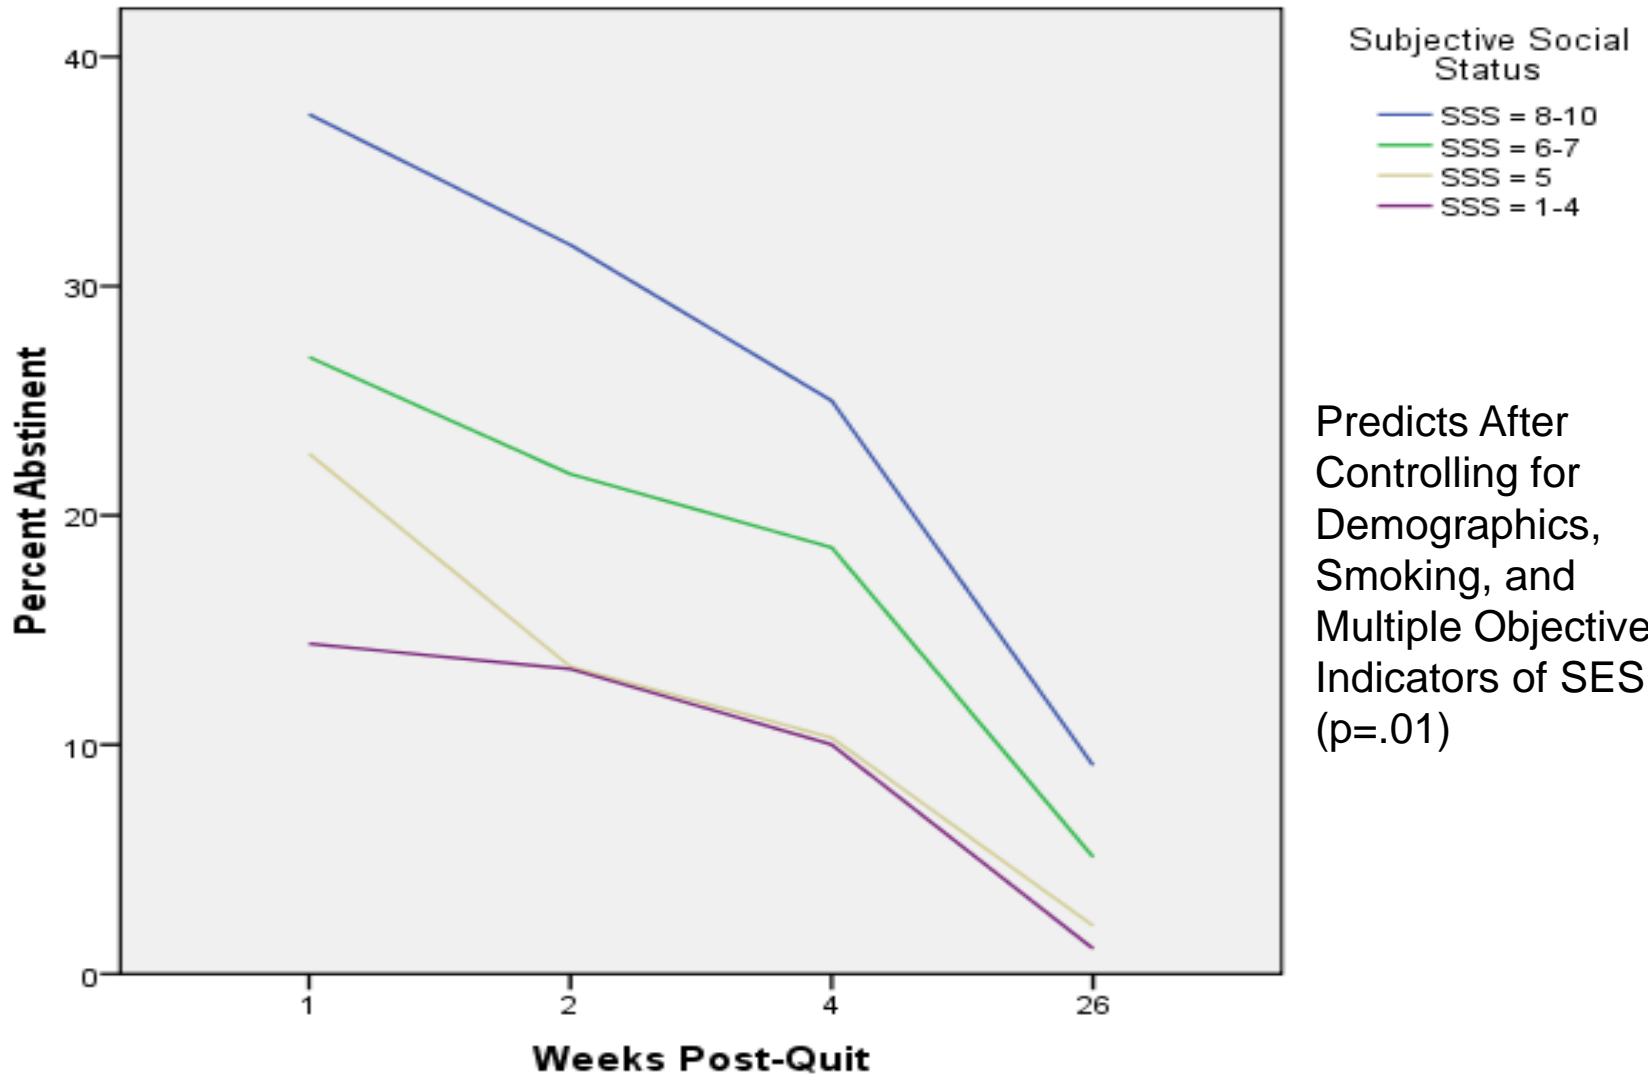

Subjective Social Status (SSS)

- SSS is an individual's belief regarding where s/he stands in one's society/community
- Individuals mark their position on the ladder with the top representing the people who are the best off ...most money, most education, best jobs...
- Determinants of SSS include:
 - Income, education, and occupation
 - Financial satisfaction
 - Perceived future security
 - Social trust
 - Perceived opportunities
 - Acculturation
 - Neighborhood factors

SSS Predicts Abstinence

Reitzel et al., *Addiction*, 2010

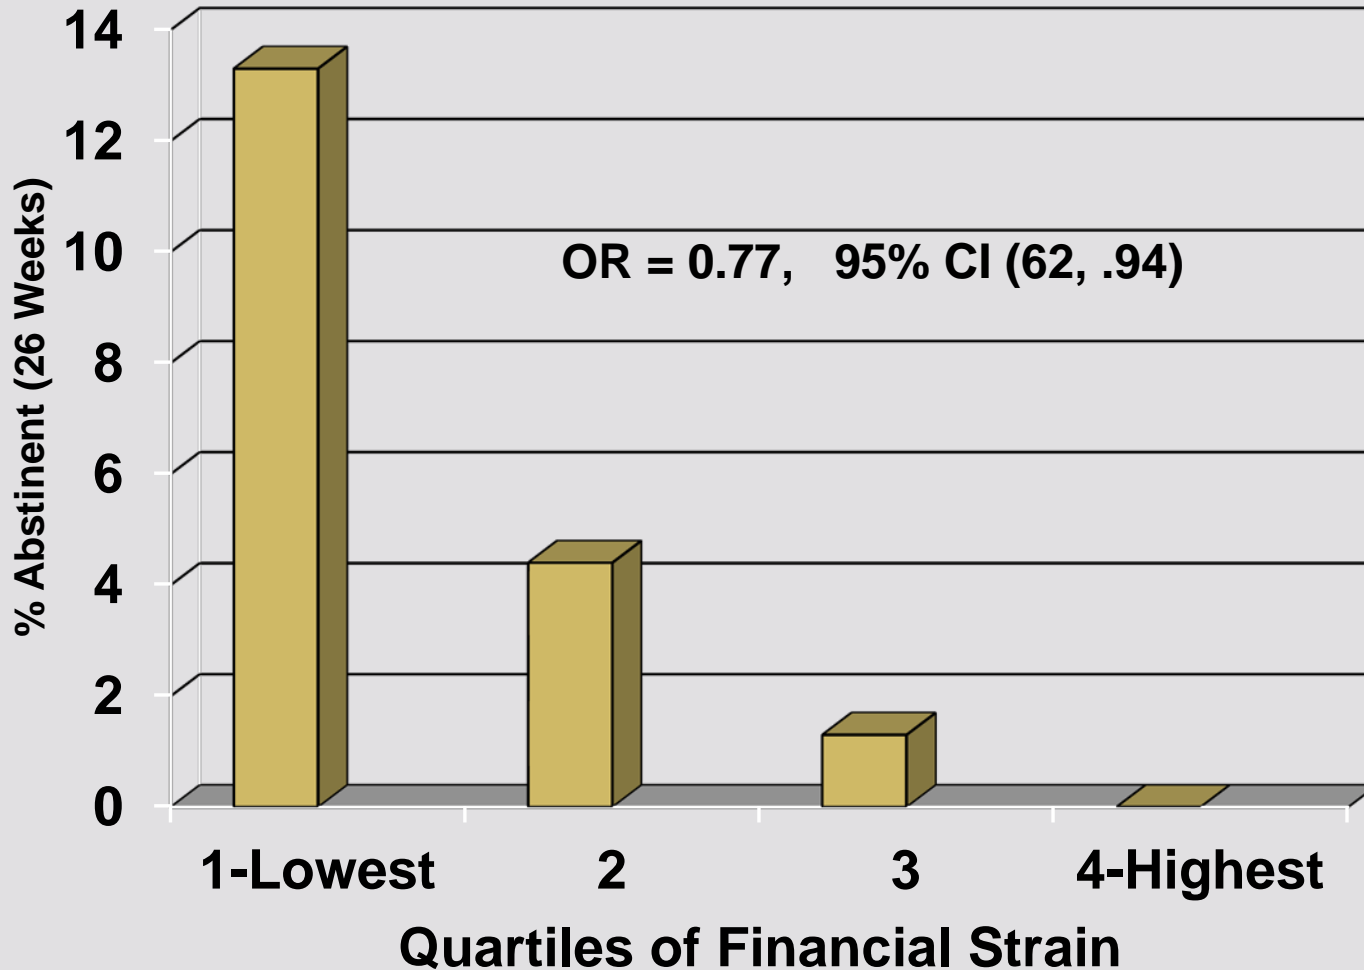

Financial Strain

- Financial strain might help capture aspects of SES for populations with varied demographic/cultural backgrounds that are not easily quantified with traditional indicators (e.g., immigrants)
- Might better capture income to needs
- Financial strain is associated with smoking in cross-sectional and observational studies

Financial Strain Predicts Abstinence

Kendzor et al., Am J of Pub Health, 2010

SES

Mapping the Pathways Linking Socioeconomics with Cessation

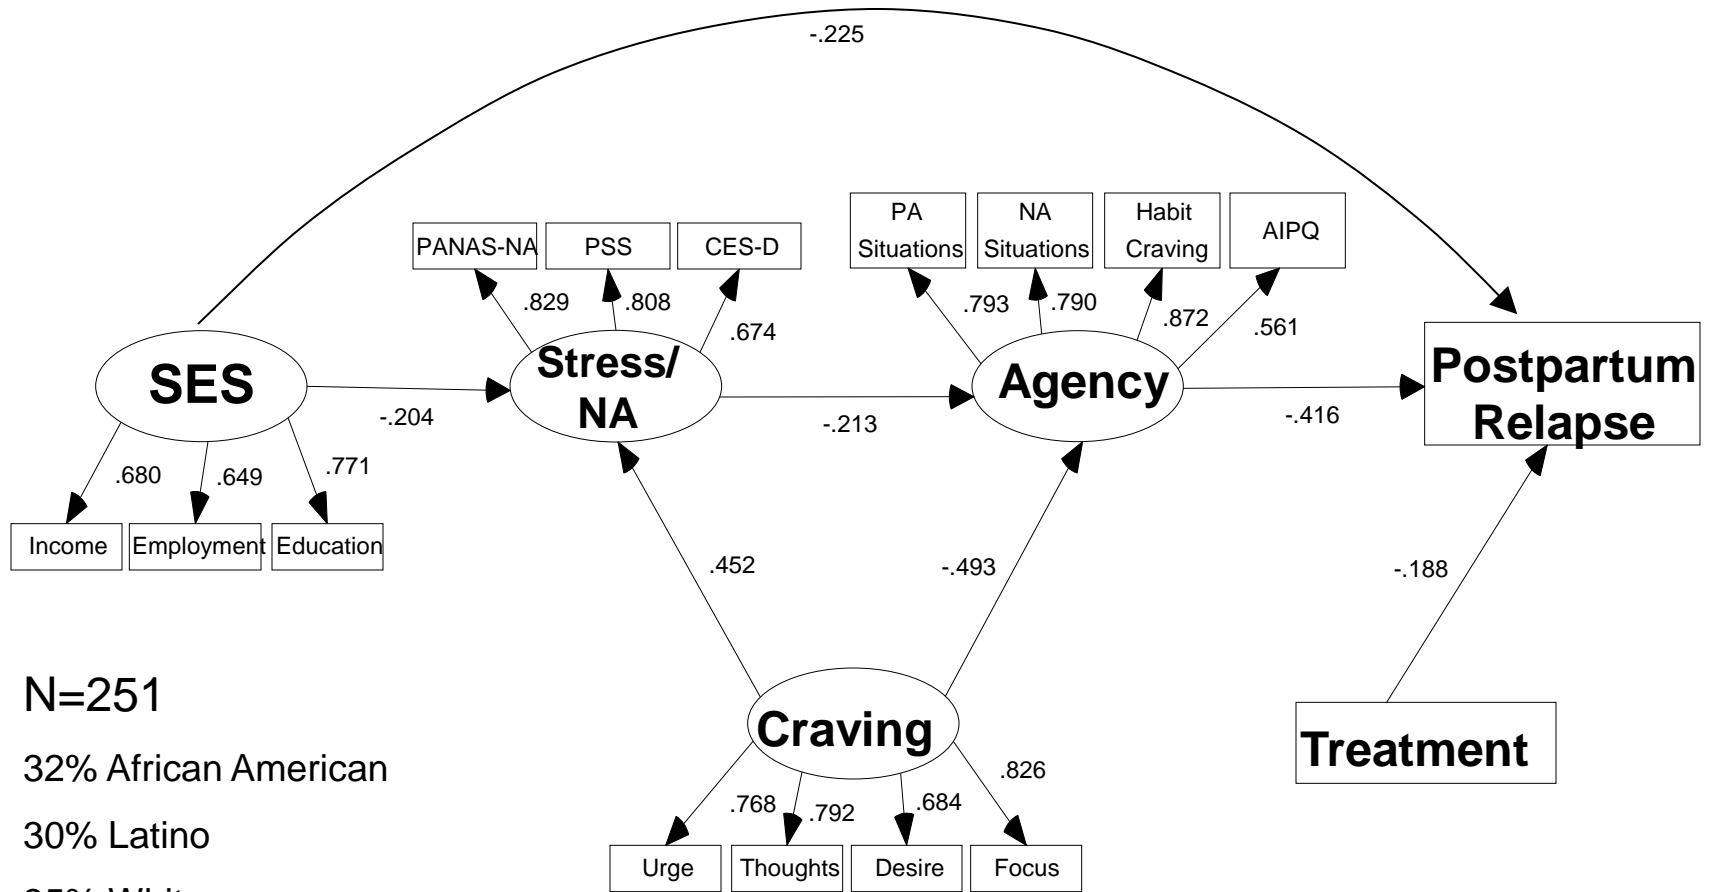

Key Hypothesized Mechanisms Underlying the SES-Health Relationship

Adler & Ostrove, 1999; Gallo & Matthews, 2003

- **Negative experiences/environments/exposure to threat or harm**
 - discrimination, chronic stressors, violence
- **Inter/Intrapersonal resources**
 - social support, collective efficacy/social capital
- **Affect/cognition**
 - stress, human agency
- **Health behaviors**
 - smoking, alcohol, diet, physical activity

SES and Postpartum Smoking Relapse (n=251)

Businelle et al., Annals of Behavioral Medicine, 2012

N=251

32% African American

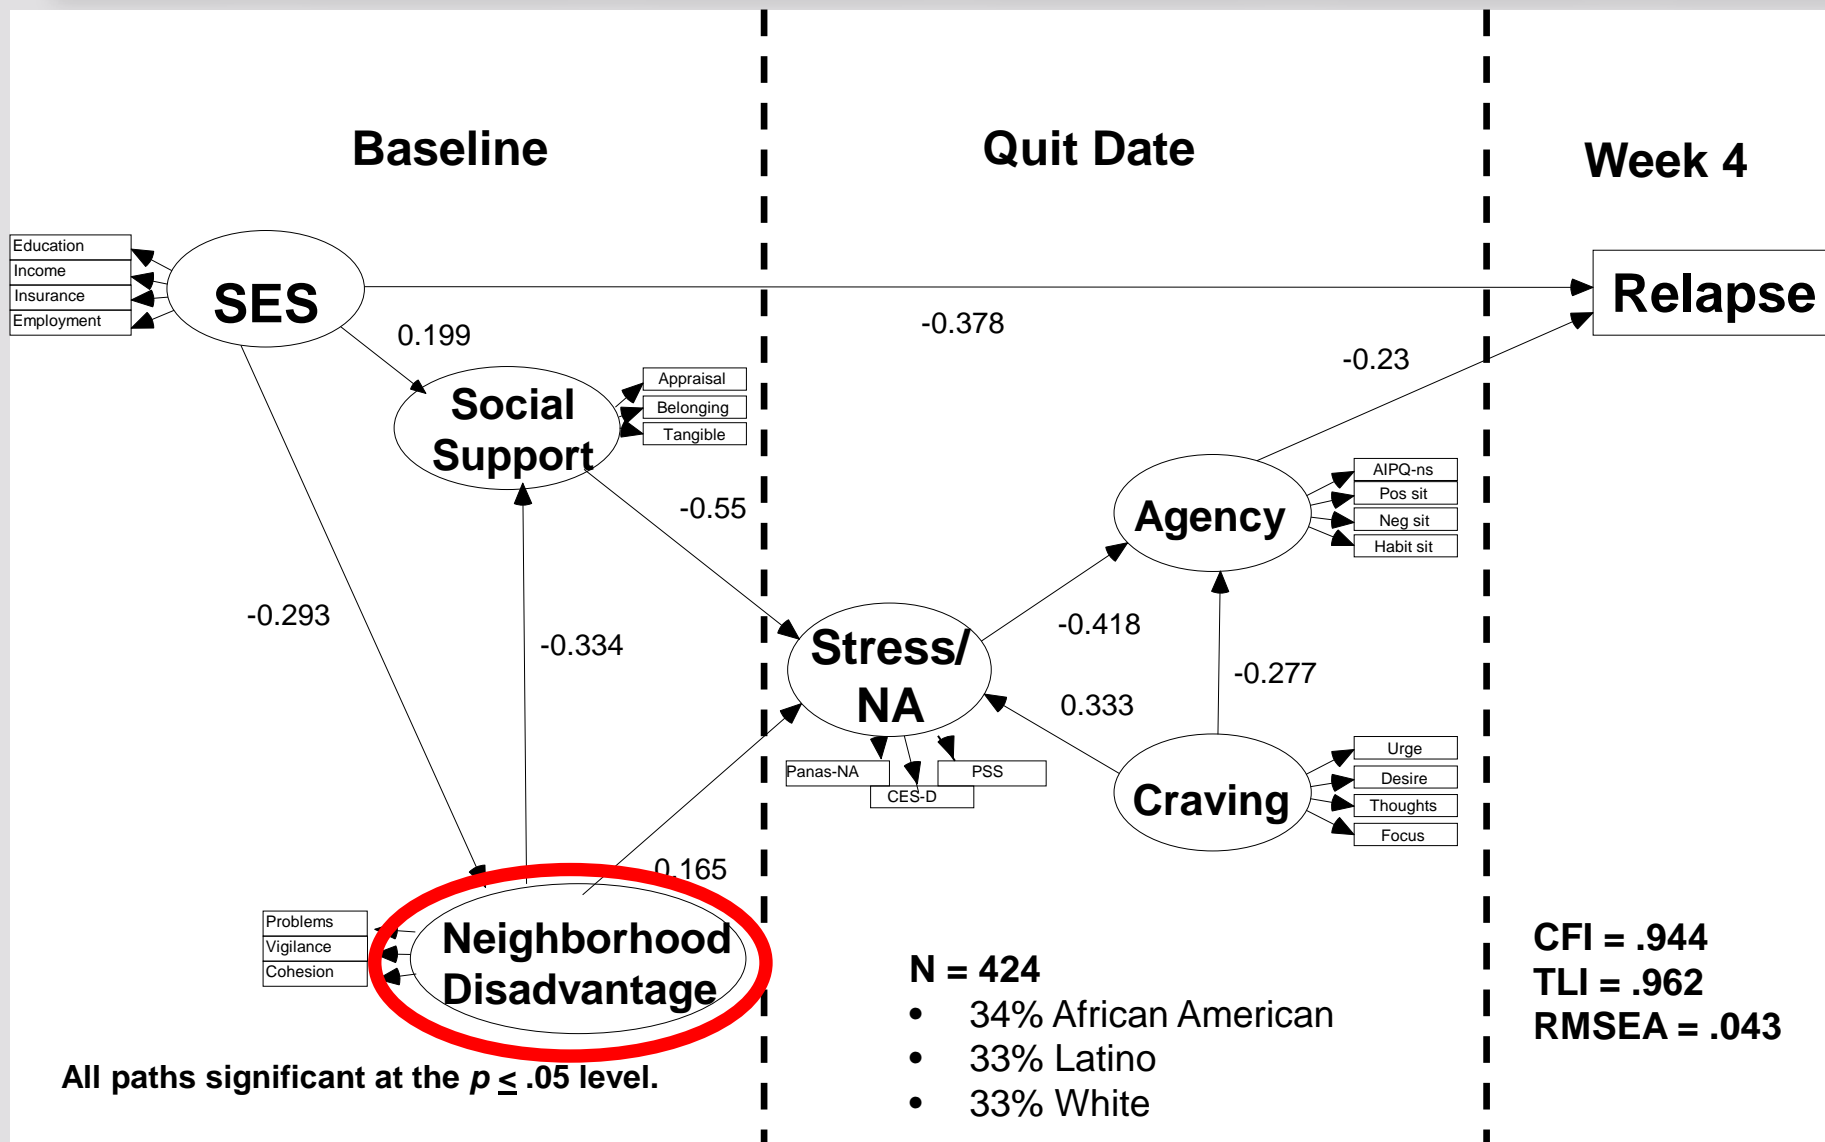

30% Latino

35% White

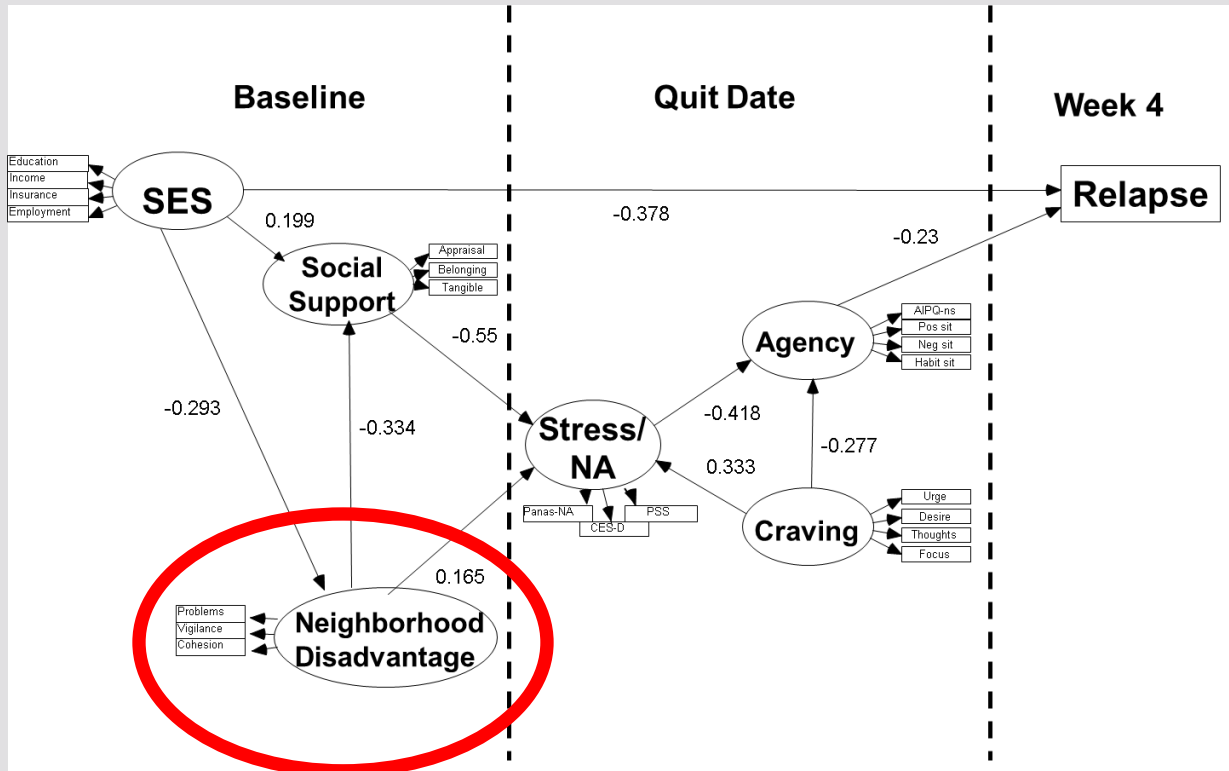

All paths significant at the $p \leq .05$ level.

Pathways Linking SES and Smoking Relapse

Businelle et al., Health Psychology, 2010

What is the role of “macro” context?

- **Socioeconomics**
 - Unemployment
 - Poverty
 - Racial/ethnic makeup
 - Home ownership
- **Social Factors**
 - Social cohesion
 - Social control
 - Vigilance/Problems
 - Crime
- **Built Environment**
 - Tobacco outlets
 - Fast food outlets
 - Sidewalks
 - Lighting
 - Greenspace

Neighborhood Demographics: Unemployment Among African Americans

Kendzor et al., Soc Sci & Med, 2012

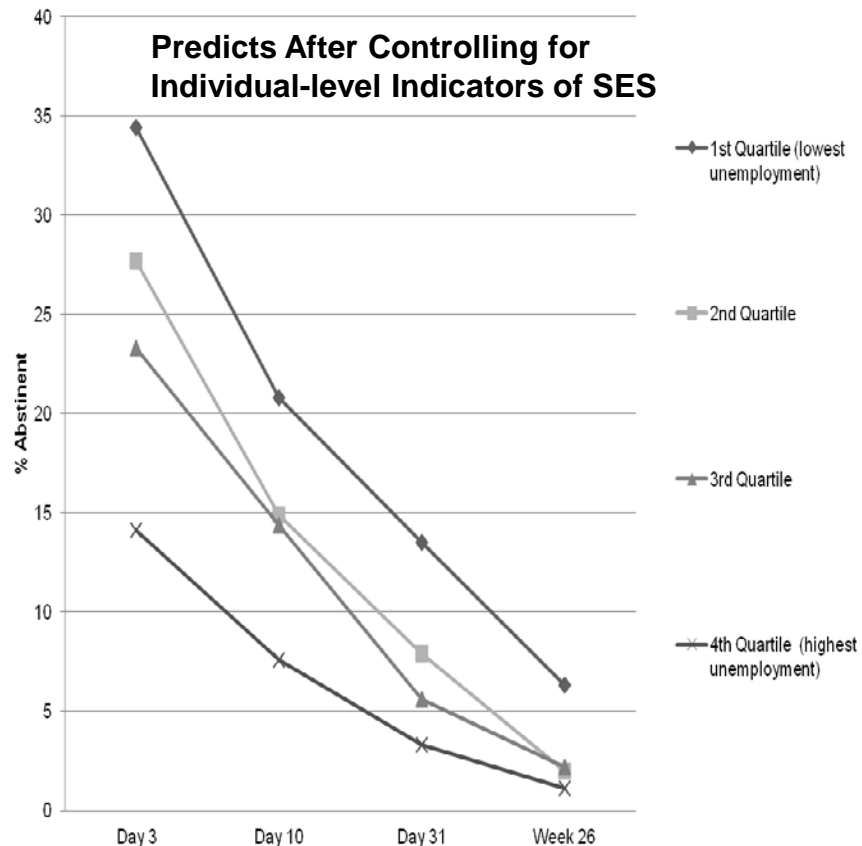

Individual-level Unemployment

Predicts After Controlling for Other Individual-level Indicators of SES, and Neighborhood-level Unemployment

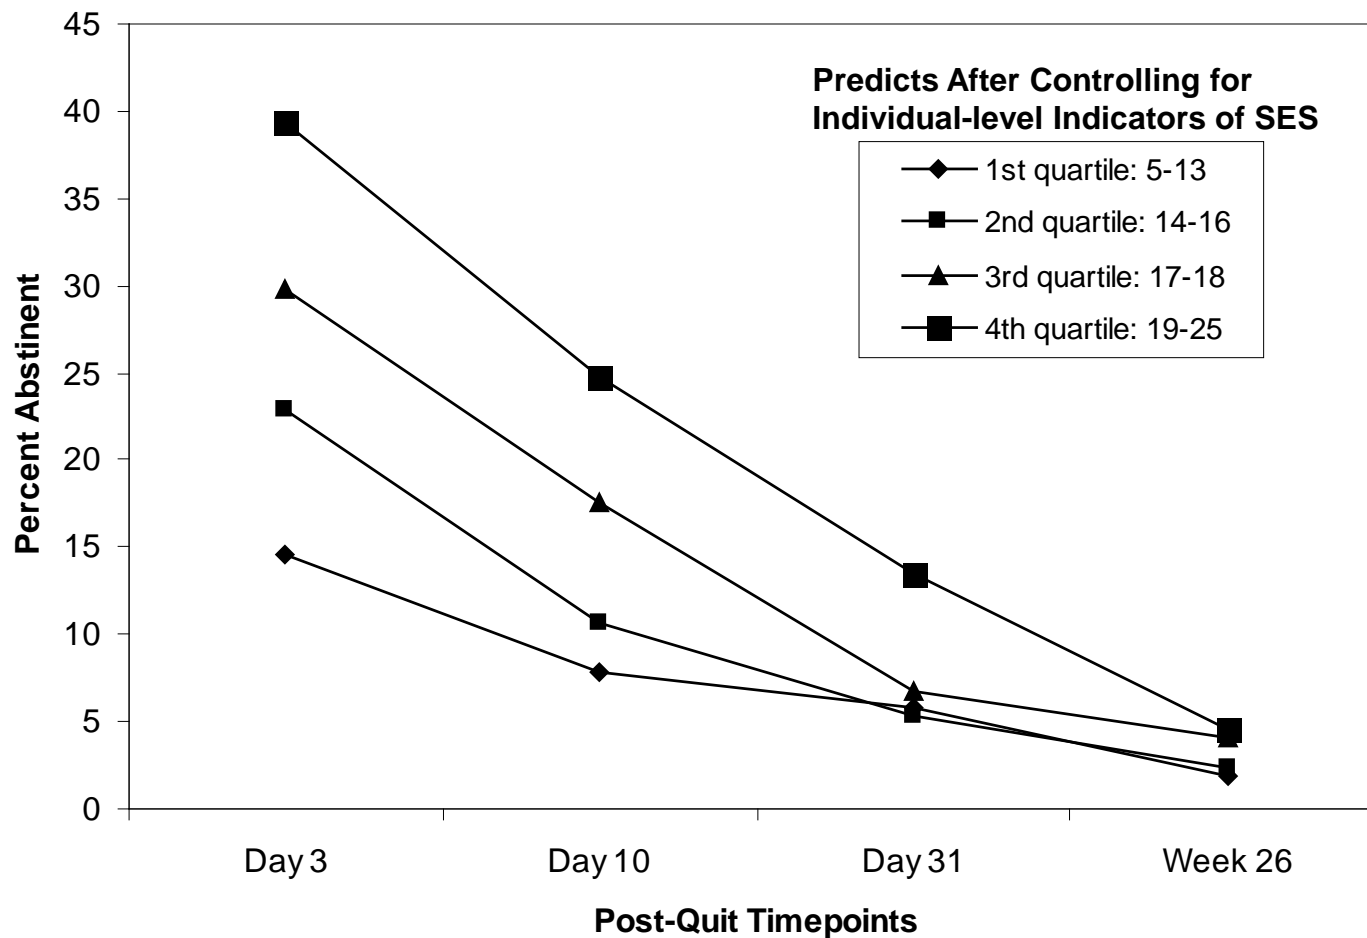

Neighborhood-Level Unemployment

Predicts After Controlling for Individual-level Indicators of SES

Neighborhood Social Factors: Social Cohesion Among African Americans

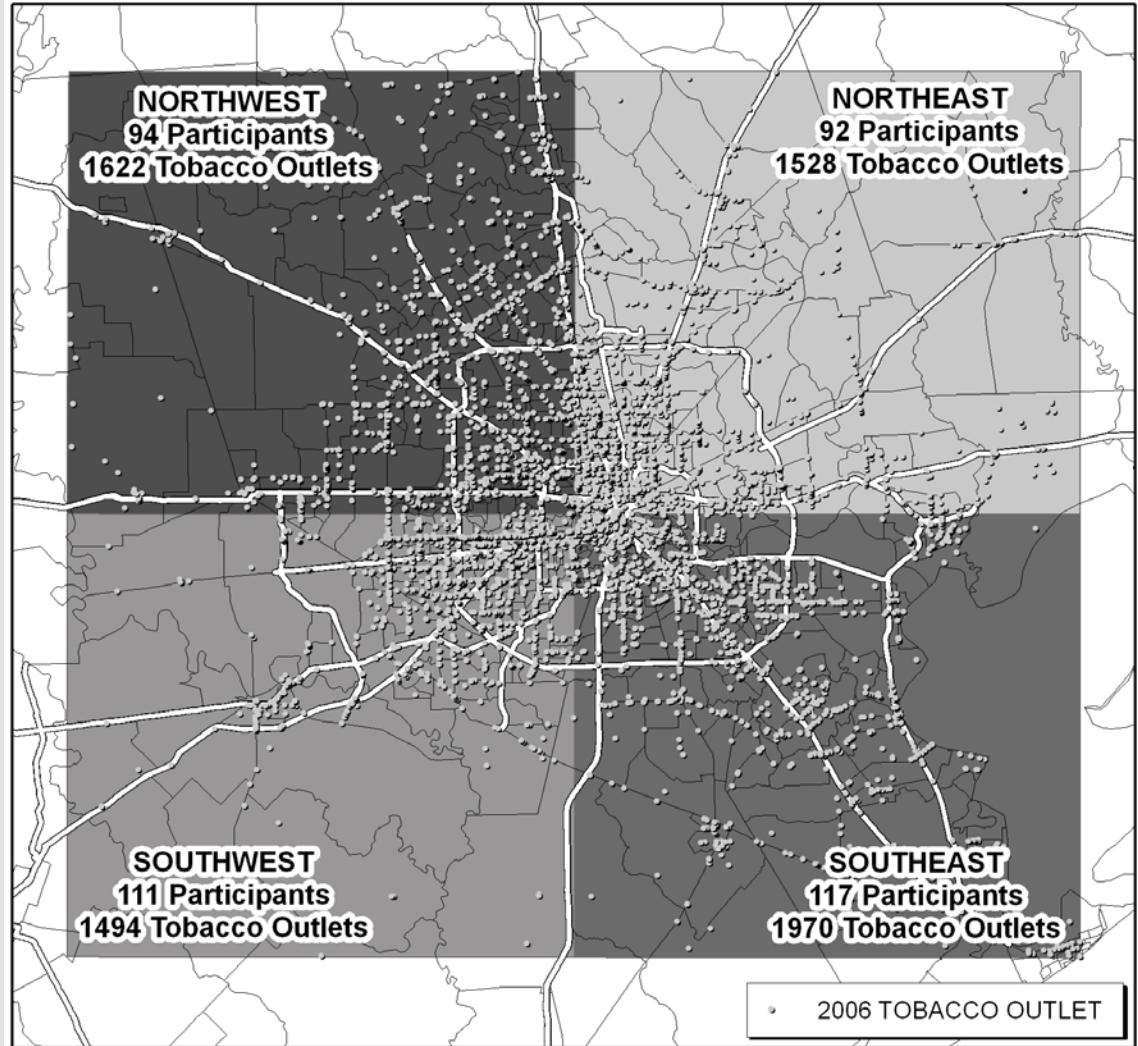

Reitzel et al., *Annals of Behavioral Medicine*, 2013

Neighborhood Built Environment: Tobacco Outlet Proximity in a Tri-Ethnic Sample

Reitzel et al., Am J of Public Health, 2011

- Economically disadvantaged neighborhoods have a higher density of tobacco retail outlets
- The impact of tobacco retail outlets on smoking cessation and relapse has implications for tobacco control and land use policies
- Residential proximity to the closest tobacco outlet predicts long-term abstinence (OR=0.54; $p = .01$)

Assessing the “micro” context using ecological momentary assessment

PROJECT WIN

Hello, Susan
Monday, November 2

RANDOM ASSESSMENT

It is time for one of the random assessments scheduled for today. You can either complete the assessment now or delay it for 5 minutes (a maximum of 4 times).

Delay 5 minutes

Go to assessment

How strong is your urge to smoke ?

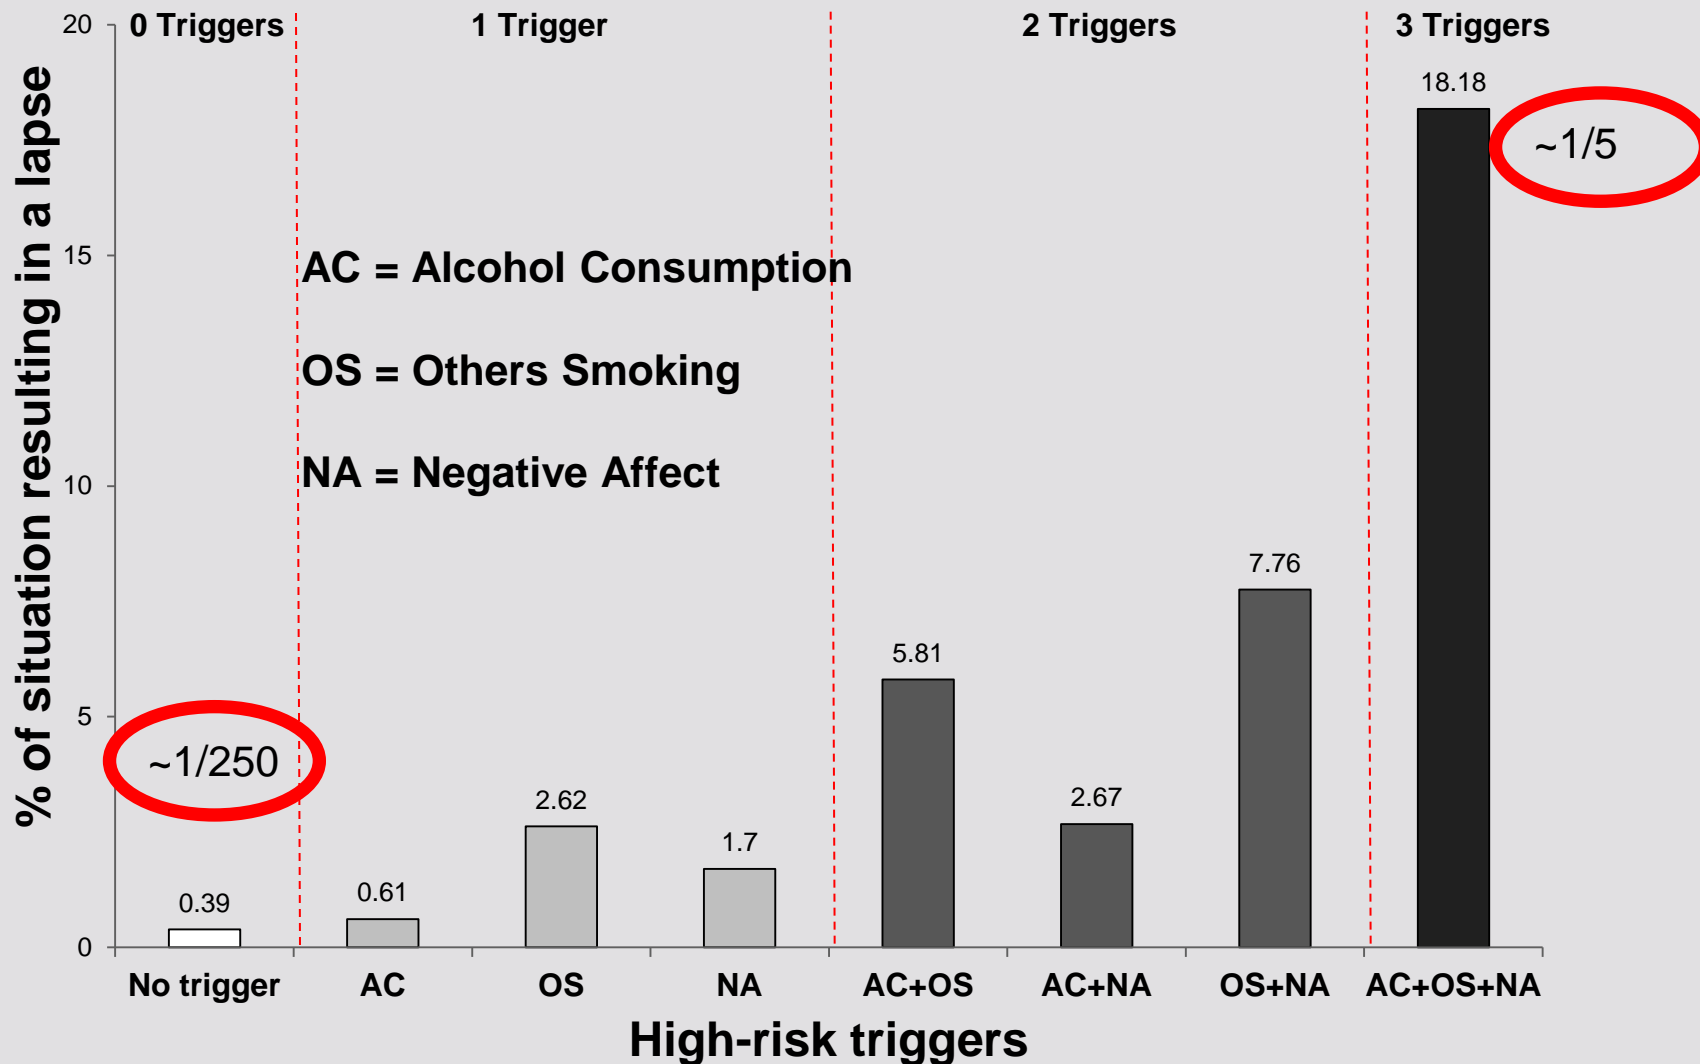

- No Urge
- Weak
- Moderate
- Strong
- Severe

Next

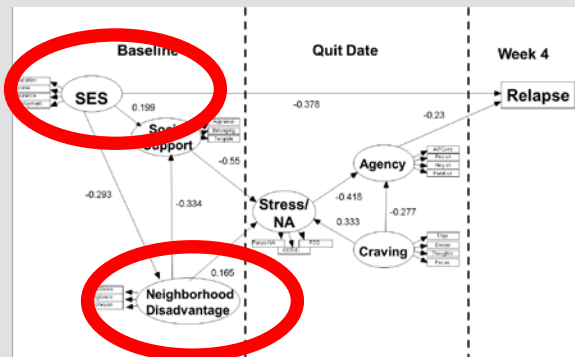

Contextual Triggers to Smoke Measured in Real Time in the Real World

Lam et al., Nic Tob Res, 2013

Overall Discovery Discussion

- Tobacco-related SES disparities impose a huge public health burden
- CONTEXT is huge (let's not forget that in the genetics/genomics era):
 - Individual
 - Community/neighborhood-level (SES, social factors, built environment)
- Comprehensive models can yield implications for interventions at various levels:
 - individual
 - community
 - policy

Community/Policy Implications

- **Socioeconomics**
 - Jobs programs
 - Minimum wage
 - Early education
 - Safety net programs
- **Social Factors**
 - Community empowerment
 - Anti crime programs
 - Smoke free
- **Built Environment**
 - Zoning
 - Point of sale
 - Taxation
 - Community improvement
